

SUDHAUS

Gravity-Lock-System

The SUDHAUS dustbin lock

- ... opens automatically when emptied by the refuse collection service
- ... no foreign waste
- ... protects private waste
- ... reduces waste charges
- ... protects against vandalism
- ... reduces waste consumption

SUDHAUS

For **users**, the lock offers protection against unauthorised access and the possibility of cost savings.

SUDHAUS News

Round lid with Lid in lid

The SUDHAUS lock 2350 is our innovative solution for locking your separately usable lid flap of a four-wheel container with round lid. In combination with our gravity side lock for round lids 2351, nothing stands in the way of safe waste disposal.

For **waste disposal companies**, the problem-free emptying through automatic opening of the bin on the vehicle is a great advantage. This offers the customer an additional service.

4-wheel container with lid in cover

For **municipalities**, the documentation of environmental awareness and citizen proximity (waste calculation by weight or volume) as well as less effort for street cleaning (no flying waste due to storms or vandalism) pays off.

SUDHAUS Innovations

We develop the right lock system for your needs

Combination-Lock-System

Two number wheels integrated into the side of the familiar red cap enable keyless opening of the waste bin lid in addition to the established opening by key. The user can set his personal individual code from 225 different combinations and protect the bin from unauthorised access.

Various lids

.... matching lock systems from SUDHAUS

No matter whether 2-wheel or 4-wheel container, we seal your waste container.

SUDHAUS

For **users**, the lock offers protection against unauthorised access and the possibility of cost savings.

Round lid with Lid in lid

The SUDHAUS lock 2350 is our innovative solution for locking your separately usable lid flap of a four-wheel container with round lid. In combination with our gravity side lock for round lids 2351, nothing stands in the way of safe waste disposal.

For **waste disposal companies**, the problem-free emptying through automatic opening of the bin on the vehicle is a great advantage. This offers the customer an additional service.

4-wheel container with lid in cover

For **municipalities**, the documentation of environmental awareness and citizen proximity (waste calculation according to weight or volume) as well as less effort for street cleaning (no flying waste due to storms or vandalism) pays off.

Always keeps tight

If the bin tips over due to a storm or vandalism, the lid remains closed.

Manually locked

Easy emptying

On the disposal vehicle, the gravity lock unlocks automatically when the container is tipped over the dumping edge. When it is set down, the lid is automatically locked again. The practical functionality of the lock is also evident here.

With key

The locking cylinders are designed for 200 different locking positions. The system is master-key capable. The waste disposal company can open all bins for inspection.

Our product variety:

The right lock for every container and its lid!

Dreikant

Assembly

Every user receives detailed and easy-to-understand installation instructions including a drilling template with the lock.

2-wheel container with internal mounting solution

SUDHAUS

The **SUDHAUS bin lock** protects various bins from unauthorised access. The bin lock makes it easy for every user: Only your own rubbish can get in. For emptying, the lock on the disposal vehicle opens automatically when the bin is tipped and closes itself when the bin is set down.
